HOW TO READ A MUTUAL FUND FACTSHEET?

LIC MUTUAL FUND

Khushiyaan, Zindagi Ki...

Do you know your Mutual Fund investment portfolio?

Do you know where your money is invested, or which stocks and sectors were added/removed after you invested in the fund?

Do you know your fund manager and his past performance?

Do you keep up with changes happening with your investments?

As an investor, you should seek answers to these questions before & after investing in a particular Mutual Fund. The Mutual Fund factsheet is a crucial source of information, facts, terminologies, figures, and disclosures that every investor should be aware of while investing in a particular fund.

IMPORTANCE OF A MUTUAL FUNDS FACTSHEET

- For potential investors, it is necessary to check a mutual fund from various aspects before investing. A mutual fund factsheet helps to understand the risk, return, the fund's objective, portfolio allocation, etc.
- With growing awareness about investments and the active promotion of mutual fund schemes, some investors may get trapped by misinterpreting mutual funds. Carefully reading a factsheet may help them understand the pros and cons of a scheme, which may help them to choose only those that suit their investment objectives and avoid others.

COMPONENTS OF A MUTUAL FUNDS FACT SHEET

BASIC FUND INFORMATION

A mutual fund factsheet usually contains the following basic information about the fund.

- **Investment objective:** It could be to generate capital appreciation, provide regular income, offer liquidity to investors, etc.
- **Category:** The category of the fund is specified. For e.g., equity, debt or hybrid scheme, and sub-categories like large-cap, mid-cap, small-cap, multi-cap equity scheme, conservative hybrid scheme or aggressive hybrid scheme, etc.
- **Type of scheme:** It could be an open-ended, close-ended or interval scheme, growth or dividend fund, liquidity fund, etc.
- **Assets under management:** The total sum of the market value of all securities in the scheme.
- Benchmark index against which the performance of the scheme can be compared.
- The minimum amount of investments required for a lump sum or a Systematic Investment Plan (SIP).
- **Exit load:** An investor would need to pay charges for redeeming mutual fund units or exiting the mutual fund scheme.
- **Riskometer:** It indicates the level of risk involved in the concerned mutual fund. The needle of the risk-o-meter points to the degree of risk involved, which can be low, low to moderate, moderate, moderately high, high or very high.

PORTFOLIO ALLOCATION

Mutual funds involve an investment of pooled money across various assets and sectors. The mutual fund factsheet constitutes crucial information about the portfolio allocation, which can give you the answer to the following questions:

- In which assets is the money being invested?
- What percentage of net assets is invested in which assets/ securities?
- In which industries/ sectors is the money being invested?
- What percentage of net assets is invested in which industries?
- What percentage of net assets is invested in which companies?
- How much cash is idle?

PERFORMANCE ANALYSIS

Another crucial part of a mutual fund factsheet is the details of the fund's historical performance. Usually, this part includes a comparison of scheme returns, SIP returns, returns against the benchmark, and the overall return of the market for one year, three years, five years, ten years or more.

DETAILS ABOUT THE FUND MANAGER

The mutual fund factsheet includes details about the fund manager's qualifications and experience. It may also contain information about the historical returns of the funds managed by the fund manager.

It is important to understand the factsheet because fund managers will analyse market trends, make investment strategies and ensure legal compliance. They are going to make investment decisions which can have a significant impact on returns generated by mutual funds.

EXPENSE RATIO

(Regulation 66 of SEBI (Mutual Funds) Regulations, Effective April 1, 2026)

Base Expense Ratio (BER) & Total Expense Ratio (TER)

TER = BER + Brokerage Cost + Transaction Cost + Statutory Levies (incl. GST)

Note: As per revised SEBI disclosure norms effective April 1, 2026, Brokerage costs, transaction costs, and statutory levies are now included within TER for enhanced transparency. All expenses charged to the scheme are within SEBI-prescribed limits.

CONCLUSION

You don't have to be a market expert to stay on top of your investments. However, it is important to learn some basics even when you consult a professional. You can start with a mutual fund factsheet and read more about mutual funds and their working. The factsheets are fairly easy to read and provide deep insight into your mutual fund working.

MUTUAL FUND INVESTMENTS ARE SUBJECT TO MARKET RISKS, READ ALL SCHEME RELATED DOCUMENTS CAREFULLY.

CEO's write up

Dear Investors,

If investing were judged only by how easy it is to begin, India would perhaps be among the world's most successful investing nations. Today, opening an investment account takes minutes. A mutual fund investment can be completed with a few clicks. Market information is available instantly and investment ideas arrive every hour through social media, television, messaging platforms, and online forums.

Yet, despite unprecedented access to markets, one truth remains unchanged: **The real test of investing is not starting. It is staying the course.**

The last few years have been a powerful reminder of this reality. India's mutual fund industry has witnessed extraordinary participation from retail investors. The industry's Assets Under Management crossed ₹ 88 lakh crore in August 2026, nearly doubling over the past five years, while mutual fund folios rose to a record 28.35 crore. SIPs have emerged as one of the most preferred investment vehicles, reflecting the growing financial discipline of Indian households. However, while starting a SIP is easy, continuing it during volatile periods is often much harder.

Every market cycle tests investor conviction. When markets rise steadily, optimism appears abundant. When volatility returns, many investors begin questioning long term goals, investment strategies, and sometimes even the wisdom of investing itself.

History suggests that such moments deserve perspective more than prediction. Consider the period from mid-2001 to the end of 2002. Global markets were grappling with the aftermath of the dot-com collapse, the September 11 terrorist attacks in the United States, geopolitical tensions, and slowing economic growth. During this phase, Nifty 50 delivered only modest returns, leaving many investors disappointed. Yet, what followed was a remarkable recovery. Nifty 50 gained nearly **72% in calendar year 2003**, rewarding those who stayed invested while uncertainty dominated headlines. A similar pattern emerged after the Global Financial Crisis of 2008. Equity markets witnessed one of their steepest declines in decades, only to rebound sharply as economic activity normalized and corporate earnings recovered. In 2009, the Nifty generated returns of over 75%, demonstrating how quickly market sentiment can reverse once confidence returns.

More recently, the Covid-19 pandemic triggered one of the fastest market corrections in history. Economic activity came to a standstill, mobility restrictions were imposed across geographies, and uncertainty reached unprecedented levels. Yet, businesses adapted, policymakers responded decisively, and markets recovered much faster than many had anticipated. Investors who remained committed to their long term plans were rewarded once again.

The lesson is not that every correction is immediately followed by a rally. The lesson is that **market declines are temporary, while the wealth creation potential of strong businesses can be enduring**.

Why do markets become volatile in the first place?

Each crisis has its own trigger, but market reactions often follow a familiar script. Geopolitical conflicts increase uncertainty. Supply chains come under stress. Commodity prices, particularly crude oil, can rise sharply. Inflation expectations move higher, prompting central banks to tighten monetary policy. Global investors often reduce risk exposure, leading to temporary capital outflows from emerging markets such as India.

The current environment reflects several of these characteristics. Yet, it is worth remembering that economies, businesses, and entrepreneurs continuously adapt to changing circumstances. Innovation does not pause during periods of uncertainty. In fact, many future market leaders often emerge during challenging times. Over longer periods, equity market returns are ultimately driven by three factors: economic growth, corporate earnings growth, and business productivity. Short term sentiment may influence prices, but long term wealth creation is determined by fundamentals.

India's structural growth story remains supported by favourable demographics, rising formalisation of the economy, expanding digital infrastructure, growing domestic consumption, and increasing financialisation of household savings. The continued rise in mutual fund participation itself reflects this transformation.

This brings us to an important point for investors - Volatility is not an interruption in the investing journey. It is an integral part of it. Periods of consolidation often create opportunities for disciplined investors. Continuing SIPs during market corrections allows investors to accumulate more units when prices are lower. Over time, this disciplined approach can meaningfully improve long term outcomes and help investors pursue important financial goals such as retirement planning, children's education, and wealth creation.

No one can consistently predict geopolitical developments, market corrections, or the timing of recoveries. What investors can control, however, is their asset allocation, their investment discipline, and their commitment to long term goals.

At LIC Mutual Fund, our endeavour remains unchanged: to help investors navigate uncertainty with discipline, research driven processes, and a long term perspective. Because while investing may never become simple, the journey becomes far more rewarding when guided by patience, discipline, and professional expertise.

Happy Investing.

Market Review & Outlook

Mr. Sudhanshu Asthana
Chief Investment Officer- Equity

EQUITY

Market Review

Indian equity markets experienced a sharp correction in September 2026, with sentiments weighing on sectoral and broader market indices. Nifty 50 declined 6.06% during the month, while Nifty Midcap 150 and Nifty Smallcap 250 fell by 7.09% and 3.12% respectively. The correction was widespread, reflecting profit booking and increased caution among investors amid evolving global macroeconomic and geopolitical developments.

Sectorally, losses were broad-based, though defensive sectors exhibited relatively better resilience. Healthcare (-2.95%) emerged as the best-performing sector despite ending in negative territory, followed by Power (-3.15%), Metals (-3.37%), FMCG (-3.72%), Capital Goods (-6.46%), and Oil & Gas (-4.00%). Financials also remained under pressure, with Bankex declining 5.33%, while Realty fell 5.67%. Weakness was more pronounced in consumption and export-linked segments, as Auto (-8.78%), Consumer Durables (-9.46%), and IT (-10.09%) registered the steepest declines during the month. The overall market trend highlighted a broad risk-off environment, resulting in declines across most sectors irrespective of their underlying fundamentals.

On the macroeconomic front, consumer price inflation (CPI) stood at 4.82% in August 2026, remaining above the Monetary Policy Committee's medium-term target and reflecting continued inflationary pressures. Wholesale Price Index (WPI) inflation was recorded at 9.92% in August 2026, indicating persistent input cost pressures across the economy. Inflation trends remained elevated during the month, warranting continued monitoring of price dynamics across both consumer and wholesale segments.

India's medium-term growth outlook remained constructive during the month, supported by resilient domestic demand conditions, ongoing infrastructure investments, and healthy corporate earnings visibility. The Q1FY27 earnings season broadly reflected stable profitability trends and continued business momentum across sectors, reinforcing confidence in the underlying strength of the economy.

Foreign Institutional Investors (FIIs) remained net sellers during September 2026, with net outflows of ₹ 35861 crore (approximately USD 3.8 billion) from the Indian equity market. This reflected heightened investor caution amid evolving global macroeconomic and geopolitical developments. Foreign investor activity remained a key determinant of market sentiment during the month, contributing to heightened volatility across equity markets.

Market Outlook

The Indian equity market in September 2026 was largely shaped by the escalation of tensions between the U.S. and Iran, which heightened concerns over potential disruptions in the Strait of Hormuz, a vital artery for global crude oil trade. The resulting increase in oil prices intensified worries around India's inflation outlook, current account deficit and fiscal position, given the country's dependence on energy imports.

Another key development during the month was the U.S. Federal Reserve's decision to raise interest rates by 25 bps on 16 September, taking the federal funds rate to 3.75%-4.00%. Coupled with elevated U.S. Treasury yields, the move tightened global liquidity conditions and enhanced the relative appeal of dollar-denominated assets, leading investors to closely monitor potential foreign portfolio outflows from emerging markets, including India.

The September meeting between U.S. President Trump and Chinese President Xi helped preserve diplomatic engagement and extend the existing trade truce, though tensions surrounding technology, artificial intelligence and Taiwan remained unresolved. For India, the ongoing strategic rivalry between the two nations continued to strengthen the long-term China+1 narrative, supporting prospects for domestic manufacturing, supply-chain diversification and export-oriented industries.

In October, the RBI MPC unanimously raised the policy repo rate by 25 bps to 5.5%, with the Standing Deposit Facility and Marginal Standing Facility rates correspondingly adjusted to 5.25% and 5.75%, respectively. The policy stance was shifted to 'calibrated tightening', with the Governor ruling out the possibility of rate cuts. The MPC revised its FY2027 headline CPI inflation forecast upward to 5.2%, reflecting broad-based pressures from higher food and core inflation. At the same time, the RBI increased its FY2027 real GDP growth projection to 7.1%, supported by resilient non-farm activity, stable employment conditions, and stronger export prospects driven by recently concluded FTAs.

Market Review & Outlook

- India's growth story remains anchored in expectations of improved consumption, a renewed emphasis on domestic manufacturing, robust capital buffers in banks, and deleveraged balance sheets of large corporates, which bode well for medium- to long-term prospects. In the short term, growth risks arise from geopolitical tensions and economic slowdowns in key export markets. However, these challenges are balanced by strong high-frequency domestic indicators and ongoing infrastructure development.

- Our preference is to focus on established market leaders who are less susceptible to disruption and demonstrate the ability to innovate within their business segments, ensuring their leadership position and competitive edge remain robust. Sustainable value creation is a core principle of our investment strategy, which prioritizes companies with strong governance standards, high capital efficiency, defensible franchises with significant moats, and long-term growth potential.

Market Review & Outlook

Mr. Marzban Irani
Executive Director – Investments

DEBT

Market Review

Headline Consumer Price Index (CPI) inflation for August came in higher than expected at 4.8% YoY, compared with 4.5% in July. The increase was primarily driven by food and beverages, with protein items such as fish, meat, milk and eggs, along with fruits and vegetables, exerting upward pressure. Fuel inflation also increased due to higher airfares, CNG prices and retail fuel prices. Core inflation also edged higher. With deficient rainfall, lower reservoir levels, the potential intensification of El Niño conditions in the coming months and persistent geopolitical tensions, inflation is expected to face further upward pressure in the coming months. The Wholesale Price Index (WPI) inflation print for August came in higher at 9.9%, primarily driven by higher fuel and power inflation, along with an increase in manufactured product prices.

The Balance of Payments (BoP) is expected to remain in surplus, supported by Foreign Currency Non-Resident (Bank) [FCNR(B)] inflows. Economic growth has remained resilient, driven by strong services and manufacturing activity, along with healthy corporate profitability. The Current Account Deficit (CAD) for FY27 is expected to remain in the range of 1.2–1.4% of Gross Domestic Product (GDP), supported by remittances, strong exports and steady services receipts. However, volatility in crude oil prices continues to pose a key risk to the external balance.

The gross borrowing programme for H2FY27 has been set at INR 7.9 Tn, accounting for 49% of the full-year issuance, implying slightly lower total borrowing than initially estimated. The issuance is skewed towards the ultra-long segment, with 30–50-year securities accounting for 26% and 15-year securities for 18% of the total. This reflects the expected strong demand from long-term investors such as insurance companies, provident funds and pension funds. Meanwhile, the 5-year segment accounts for a lower share of 12%, allowing greater flexibility for Open Market Operations (OMO) sales, while the 10-year segment's share has also been reduced to 26%. Gross T-bill issuance for Q3FY27 is estimated at INR 3 Tn. Gross state government borrowings for H2FY27 are also expected to be slightly lower, supported by cash surpluses, slower revenue and capital expenditure and improved fiscal performance. Despite the risk of fiscal slippage at the Centre, additional G-sec issuance is not expected, given the adequate cash surplus due to divestment and non critical expenditure savings. Centre's Fiscal is well positioned to handle the impact of the geopolitical conflict.

As of mid-September, surplus system liquidity stood at approximately ₹ 9.5 trillion, driven by inflows from the FCNR B scheme. To absorb the excess liquidity and align overnight money market rates more closely with the policy repo rate, the RBI announced OMO sales worth ₹ 1 trillion, comprising three tranches of ₹ 50,000 crore, ₹ 25,000 crore and ₹ 25,000 crore, scheduled for the second half of the month. The RBI also continued conducting daily fine-tuning Variable Rate Reverse Repo (VRRR) operations and intervened in the foreign exchange market through dollar sales, which further absorbed rupee liquidity. By the final week of September, the system liquidity surplus had declined to approximately ₹ 4.5 trillion. Consequently, TREPS rates, which had fallen to around 4.35% at the beginning of the month amid abundant surplus liquidity, firmed up towards month-end to trade in the 5.25–5.45% range.

The domestic 10-year G-sec yield remained volatile throughout the month, trading in the 6.95–7.20% range. The movement was primarily driven by persistent geopolitical tensions, which kept crude oil prices volatile, along with the US 10-year Treasury yield crossing the 5% mark.

The Fed, in its September meeting, hiked rates by 25 bps to 3.75–4.00%, in line with market expectations. The decision was driven by macroeconomic data, including inflation and labour market conditions. Although inflationary pressures were largely supply-driven, the Fed remained cautious about potential second-round effects. The Federal Open Market Committee (FOMC) dot plot indicated one more 25 bps rate hike in 2026, with 16 out of 18 participants projecting a higher year-end policy rate. For 2027, the median projection indicated no further rate hike, although 8 participants continued to project one additional hike. The Fed also revised its growth and inflation projections upwards, with inflation expected to return to its 2% target by 2029. Following the meeting, the US 10-year Treasury yield traded above 5%, while the 2-year yield remained around 4.75%. The Dollar Index strengthened above 100, putting pressure on the euro and the Japanese yen.

Market Outlook:

Inflationary pressures are expected to persist and could intensify further, primarily due to the potential strengthening of El Niño conditions, which may affect crop yields and food prices, along with continued volatility in crude oil prices amid the ongoing West Asia conflict. These factors pose upside risks to the inflation outlook.

The RBI is expected to continue managing liquidity through its liquidity-absorption measures, while we expect cumulative rate hikes of 50 bps in 2026, with the RBI focusing on maintaining positive real interest rates amid rising inflationary pressures. We also expect the FOMC to deliver a 25 bps rate hike in 2026. The domestic 10-year G-sec yield is expected to trade in the range of 7.15–7.25%, while the US 10-year Treasury yield is expected to remain in the 4.95–5.10% range. Persistent crude oil price volatility, elevated US Treasury yields and geopolitical uncertainty are likely to keep bond markets volatile. The lower share of 5-year and 10-year G-sec issuance and the higher allocation to ultra-long bonds could lead to divergent yield movements across maturities, depending on demand from insurance companies and pension funds. A sustained rise in crude prices could widen the CAD, put pressure on the rupee and add to imported inflation.

First Tier Benchmark: BSE Sensex TRI

Minimum Investment (lumpsum):

For Subscription of units directly with Mutual Fund:
All direct transactions in units of the Scheme by Market Makers (MM) /Authorised Participants (AP) or other eligible investors with the AMC/the Fund shall be at intra-day NAV based on the actual execution price of the underlying portfolio. Any order placed for redemption or subscription directly with the AMC must be of greater than INR 25 Cr. The aforesaid threshold shall not be applicable for APs/MMs and shall be periodically reviewed. Each creation unit consists of 2,000 units of LIC MF BSE Sensex ETF. The Fund may from time to time change the size of the Creation Unit in order to equate it with marketable lots of the underlying instruments.

For Purchase / Sale of units through Stock Exchange:
As the Units of the Schemes are listed on NSE & BSE, an Investor can buy Units on continuous basis on the capital market segment of NSE during trading hours like any other publicly traded stock at prices which may be close to the actual NAV of the Scheme. There is no minimum investment, although Units are Purchased in round lots of 1 (one) Unit.

LIC MF NIFTY 8-13 YR G-SEC ETF

An Open Ended Scheme replicating/tracking Nifty 8-13 Yr. G-Sec Index. A relatively high interest rate risk and relatively low credit risk.

LIC MUTUAL FUND

Data as on last working day unless mentioned otherwise

SCHEME FEATURES

Scheme Type: An Open Ended Scheme replicating/tracking Nifty 8-13 Yr. G-Sec Index. A relatively high interest rate risk and relatively low credit risk.

NSE Scrip Code: LICNETFGSC

Inception/Allotment Date: December 24, 2014

Fund Size:
AUM : ₹ 1,703.74 Cr
Average AUM : ₹ 1,866.33 Cr

Load Structure:
Exit Load: Nil

Liquidity: The Units of the scheme are listed on National Stock Exchange(NSE).

NSE Disclaimer: It is to be distinctly understood that the permission given by NSE Limited should not in any way be deemed or construed that the Scheme Information Document has been cleared or approved by NSE nor does it certify the correctness or completeness of any of the contents of the Scheme Information Document. The investors are advised to refer to the Scheme Information Document for the full text of the 'Disclaimer Clause of NSE '.

First Tier Benchmark: Nifty 8-13 yr G-Sec Index

Minimum Investment (lumpsum):

For Subscription of units directly with Mutual Fund:

All direct transactions in units of the Scheme by Market Makers (MM) / Authorised Participants (AP) or other eligible investors with the AMC/the Fund shall be at intra-day NAV based on the actual execution price of the underlying portfolio. Any order placed for redemption or subscription directly with the AMC must be of greater than INR 25 Cr. The aforesaid threshold shall not be applicable for APs/MMs and shall be periodically reviewed. Each creation unit consists of 1,00,000 units of LIC MF Nifty 8-13 yr G-sec ETF. The Fund may from time to time change the size of the Creation Unit in order to equate it with marketable lots of the underlying instruments.

For Purchase / Sale of units through Stock Exchange:

As the Units of the Schemes are listed on NSE, an Investor can buy Units on continuous basis on the capital market segment of NSE during trading hours like any other publicly traded stock at prices which may be close to the actual NAV of the Scheme. There is no minimum investment, although Units are Purchased in round lots of 1 (one) Unit.

INVESTMENT OBJECTIVE

The investment objective of the Scheme is to invest only in and all the stocks comprising the NIFTY Next 50 Index in the same weights of these stocks as in the Index with the objective to replicate the performance of the Total Returns Index of NIFTY Next 50 Index. The Scheme may also invest in derivatives instruments such as Futures and Options linked to stocks comprising the Index or linked to the NIFTY Next 50 Index. The Scheme will adopt a passive investment strategy and will seek to achieve the investment objective by minimizing the tracking error between the NIFTY Next 50 Index (Total Returns Index) and the Scheme.

There is no assurance that the investment objective of the Scheme will be achieved.

LIC MF GOLD EXCHANGE TRADED FUND

An open-ended scheme replicating/tracking the performance of gold in domestic prices

LIC MUTUAL FUND

Data as on last working day unless mentioned otherwise

SCHEME FEATURES

Scheme Type: An open-ended scheme replicating/tracking the performance of gold in domestic prices.

NSE Scrip Code: LICMFGOLD

BSE Scrip Code: 533719

Inception/Allotment Date: November 09, 2011

Fund Size:
AUM : ₹ 1,441.20 Cr
Average AUM : ₹ 1,477.01 Cr

Load Structure:
Exit Load: Nil

Liquidity: The Units of the scheme are listed on National Stock Exchange(NSE) & Bombay Stock Exchange Ltd.(BSE).

NSE Disclaimer: It is to be distinctly understood that the permission given by NSE Limited should not in any way be deemed or construed that the Scheme Information Document has been cleared or approved by NSE nor does it certify the correctness or completeness of any of the contents of the Scheme Information Document. The investors are advised to refer to the Scheme Information Document for the full text of the 'Disclaimer Clause of NSE '.

BSE Disclaimer: It is to be distinctly understood that the permission given by BSE Limited should not in any way be deemed or construed that the SID has been cleared or approved by BSE Limited nor does it certify the correctness or completeness of any of the contents of the SID. The investors are advised to refer to the SID for the full text of the 'Disclaimer Clause of the BSE Limited'.

First Tier Benchmark: Domestic Price of Gold

Minimum Investment (lumpsum):

Authorized Participants & Large investors – In creation unit lot of 1,20,000 units and multiples of 1,20,000 units thereof or in equivalent amount in cash. The AMC will not accept Portfolio Deposit (i.e. physical gold) from its investors. However, the AMC at its absolute discretion may accept Portfolio Deposit (i.e. physical gold) from Authorized participant subject to the satisfaction of conditions prescribed by the custodian appointed by the Mutual Fund for the custody of Gold.

As per Paragraph 6.12 of SEBI Master Circular for Mutual Funds the Scheme will offer units for subscription / redemption directly with the Mutual Fund for amounts greater than Rs.25 Cr at intraday NAV based on the actual execution price of the underlying portfolio on all Business Days during the ongoing offer period. The aforesaid threshold will not be applicable for Market Makers and will be periodically reviewed. The requirement of "cut-off" timing for NAV applicability as prescribed by SEBI from time to time will not be applicable for direct transaction with LIC AMC in ETFs by Market Makers and other eligible investors.

Other investors – On an ongoing basis, other investors may subscribe to the units of the Scheme by purchasing the units from the Stock Exchange where the Scheme is listed.

Minimum size for subscription on the Stock Exchange – 1 unit or in multiples thereof.

CAGR returns are computed after accounting for the cash by using XIRR method (investment internal rate of return) for Direct Plan - Growth Option. Load is not taken into consideration for computation of performance. The Mutual Fund is not guaranteeing or promising or forecasting any returns. Since inception returns are assumed to be starting from the beginning of the subsequent month from the date of inception. The performance of the scheme is benchmarked to the Total Return variant of the index.

Performance of Schemes Managed by the Fund Manager - September 2026

	Moderate (Class II)			
	Relatively High (Class III)			
	*B-I - A Relatively Low Interest Rate Risk and Moderate Credit Risk.			

GLOSSARY

Application Amount for Fresh Subscription:

This is the minimum investment amount for a new investor in a mutual fund scheme

Asset allocation:

Investment of certain proportions of a portfolio in different assets classes like Equity, Debt, Gold etc..

Asset allocation for Equity:

The allocation is based on industry classification and not any separate sector classification.

AUM:

AUM or assets under management refers to the recent / updated cumulative market value of investments managed by a mutual fund or any investment firm.

Benchmark:

A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE200, BSE500, 10-year Gsec.

Beta:

Beta is a measure of an investment's volatility vis-a-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

Entry Load:

A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry Load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is Rs 100 and the entry load is 1%, the investor will enter the fund at Rs 101.

Note: SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assestment of various factors including the service rendered by the distributor.

Exit Load:

Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is reduced from the prevailing NAV at the time of redemption. The investor will receive redemption proceed at net value of NAV less Exit Load. For instance if the NAV is Rs 100 and the exit load is 1%, the investor will receive Rs 99.

Expense ratio:

The expense ratio is the annual fee that funds or ETFs charge their unit holders. It expresses the percentage of assets deducted each fiscal year for fund expenses.

Holdings:

The holdings or the portfolio is a mutual fund's latest or updated report statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Fund Manager:

An Employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.

Maturity profile:

Maturity is a term defined with respect to Debt Instruments which have fixed maturities after which they cease to exist on payment of the principal and the stipulated interest. A fund's profile consisting of the allocation of the value of assets in terms of percentage and their time left to maturity respectively is called a maturity profile. It gives a summary of the breakup of the value of assets with different specified maturities.

Minimum Additional Amount:

This is the minimum investment amount for an existing investor in a mutual fund scheme.

Macaulay Duration:

Macaulay Duration is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price.

Modified Duration:

Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

Nature of Scheme:

The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have subcategories.

NAV:

The NAV or the net asset value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.

Portfolio turnover ratio:

Portfolio turnover is a measure of how frequently assets within a fund are bought and sold by the managers. This ratio measures the fund's trading activity, which is computed by taking the lesser of purchases or sales and dividing by average monthly net assets. Number of securities bought or sold (whichever is lesser)/Average AUM of the Fund.

Portfolio Yield:

Disclosure only required for Debt Funds.

Rating Profile:

Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

Risk Free Returns:

MIBOR rate for 1 day. To be sourced from FIMMDA (http://www.fimmda.org) for last day of the month.

Sector allocation:

Sector allocation may be defined as an allocation of funds in a certain percentage of the portfolio in different sectors of the economy.

Sharpe Ratio:

The Sharpe Ratio, names after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

SIP:

SIP or systematic investment plan works on the principle of making periodic investments of a fixed sum. Its works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that the invests Rs 500 every 15 of the month in an equity fund for a period of three years.

SIP Return:

The SIP return calculation should be based on Rs. 10,000 invested every month. Returns would be 1 year, 3 year, 5 year, 7 year etc.

Standard Deviation:

Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, its means its range of performance is wide, implying greater volatility.

Tracking error:

Tracking error is the difference between the return fluctuations of an investment portfolio and the return fluctuations of a chosen benchmark. The return fluctuations are primarily measured by standard deviations.

Yield to Maturity:

The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.
